

Forever Green

Beautifying the Lowcountry since 1989

No matter how long the winter, spring is sure to follow.

-Author unknown

Being Forever Green does have its advantages,
we never get pinched on St. Patrick's Day!

- Clean** up and fertilize perennials.
- Lower** the height of warm season turf such as Zoysia or Bermuda grass to a height of 1.5 inches.
- Deadhead** and fertilize pansies or other winter seasonal color plant material. Continue to monitor for insect or disease infestations and treat as necessary.
- Start** up energizing irrigation systems. Inspect system, repair or upgrade as necessary.
- Apply** dormant oil to acceptable plant materials to control scale infestations. Monitor ornamental trees for any indication of possible Asia Ambrosia beetle infestation.
- Begin** aggressively and mechanically treating or removing bed and pavement weeds as necessary. Apply pre-emergent herbicide to bed areas to help reduce weed infestations.

We are there when you need us,
even when you don't know you do.

March 2011
Thank you for supporting
your local businesses.

- Treat** fire ant mounds as they appear.
- Complete** winter cutbacks of shrubs such as Variegated Privet, Roses, Abelia, Elaeagnus and other ornamental plant material where flowers are generated on new wood.
- Begin** fertilization of shrubs and turf according to contract requirements.*

Wherever you go and
whatever you do,
may the luck of the Irish,
be there with you.
HAPPY ST. PATRICKS DAY!

*Depending upon contract agreement
