

*Always do right. This will gratify some people and astonish the rest.*

- Mark Twain

As your grass and plants sleep during the cold weather, you can still find us outside hard at work...

**Completing** any remaining leaf removal. Thoroughly removing any leaves from shrub beds.

**Deadhead** and fertilizing pansies or other winter seasonal color plant material. Monitoring for: possible insect, disease infestations, deer or rabbit damage and treating as needed.

**Complete** corrective pruning of Crape Myrtles. Creating V-shape canopy. Thinning interior branches and raising canopy height.

**Beginning** winter cutbacks of Liriope and Ornamental grasses.

**Trench** & pine straw/mulch any unnecessary turf grass areas (obstacles, shaded out) that make mowing operations inefficient.

We are there when you need us, even when you don't know you do.

**Complete** cutbacks of Juniper species, both upright and horizontal varieties.

**Begin** raising canopy height of hardwood trees as necessary. Raise to a height of 12-15 depending on the size of tree. (Remember the 2/3 canopy to 1/3 trunk ratio for height)

**Begin** corrective pruning of all Hollies to return these plants to proper size, separate from other plant materials, and thin to rejuvenate.

**Apply** dormant oil to acceptable plant materials to control scale infestations. Monitor ornamental trees for any indication of possible Asia Ambrosia beetle infestation.
